PROFESSIONAL SUMMARY

Python Django full stack developer specializing in high-concurrency backend architectures, RESTful APIs, and reactive user interfaces. Experienced in deploying autonomous agentic AI workflows and LLM-driven automation into production web systems using Django, Django RE Framework, and PostgreSQL with robust unit testing and transactional integrity.

TECHNICAL SKILLS

Languages: Python 3, JavaScript (ES6+), SQL, HTML5, CSS3
Backend Engineering: Django, Django REST Framework (DRF), ASGI/WSGI, RESTful API Design, Middleware
Frontend & UI: React, Three.js, Responsive Web Design, Tailwind CSS, Modern UI Architecture
AI & Integrations: Autonomous Agentic AI, LLM Integration, LangChain, Prompt Engineering, RAG Workflows
Databases & Storage: PostgreSQL, SQLite, Database Normalization, Indexing, Query Optimization
Tools & Methods: Git, GitHub, Docker (basics), Agile/Scrum, CI/CD, Linux Terminal, Postman

KEY PROJECTS & AI SYSTEMS

FinSight AI - Intelligent Personal Finance & Cash-Flow Forecasting Platform

- Problem Solved: Eliminates personal liquidity risks and cash-flow volatility by identifying recurring spending leaks and projecting monthly balance traje
- Stack Architecture: Engineered high-throughput REST APIs using Python, Django REST Framework, and PostgreSQL with normalized schemas and
- AI/LLM Integration: Integrated LangChain and LLM reasoning pipelines to automatically parse banking statements, classify transactions, and project f

PayMatch AI - Intelligent Payment Reconciliation & Discrepancy Detection System

- Problem Solved: Resolves multi-gateway payment mismatches, fee anomalies, and missing settlement records across high-volume merchant transac
- Stack Architecture: Architected robust backend reconciliation workflows in Python and Django with strict ACID transaction guarantees and batch Post
- AI/LLM Integration: Implemented fuzzy matching agents and LLM-driven discrepancy analyzers to classify anomalies and generate automated audit r

FinSim - Personal Financial Stress Testing & Scenario Simulator

- Problem Solved: Enables users to evaluate financial resilience by simulating real-world shocks like inflation spikes, medical emergencies, and income
- Stack Architecture: Developed deterministic financial simulation algorithms using Python and Django ORM, synchronized with reactive interactive cha
- AI/LLM Integration: Integrated generative AI scenario modeling agents that evaluate multi-variable macroeconomic conditions and formulate personal

EDUCATION & TRAINING

Python Django Full Stack Development (6-Month Professional Program) — Avodha | In progress (5 of 6 mos completed)
Coursework: Python 3, Django, DRF, Relational Databases, REST API Engineering, Full Stack Architecture

Bachelor of Science (B.Sc), Computer Science — KMM College | Coursework Completed (2023 - 2026)
Coursework: Data Structures, Object-Oriented Programming, Database Systems, Software Engineering, Operating Systems

Higher Secondary Education (HSS) - Science & Computer Applications — Sahodaran Memorial HSS | Completed

Secondary School Leaving Certificate (SSLC) — Rama Varma Union High School | Completed
